

# CENSUS@School

[www.statistics.gr/el/edu](http://www.statistics.gr/el/edu)

In the context of the project for “**Fostering Statistical Literacy in Greece**”, the Hellenic Statistical Authority (ELSTAT) designed and put into operation, for the first time in Greece, the online platform “Census@School”.

## Census at School

is a training programme based on the international project census@school, implemented by many countries worldwide. It contains educational material with instructions on the procedure and the activities of a census survey. The pupils are given the opportunity to work together by collecting and analysing statistical data and they can understand the similarities and differences at the level of a class or at the level of a school unit.

## The purpose

of the educational project is to contribute to the statistical training of pupils, as well as to promote statistical literacy with the use of information and communication technologies (ICT).

## E-platform

<http://censuschool.statistics.gr>

The online platform to be used is the open source online learning platform “Moodle”.

## Procedure

- 1 The teacher makes his registration through the platform.
- 2 The pupils enter the platform and fill in the questionnaire anonymously.
- 3 The teacher receives a file containing all the pupils' answers.
- 4 The teacher can repeat the census in different classes and the pupils can compare the results.

## The pupils

- Learn about a census survey
- Collect and analyse data
- Submit their research questions
- Present and compare their results

## The roles of the system

### ADMINISTRATOR

will have full access to all verifiers

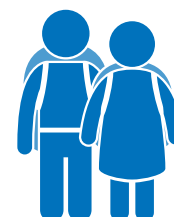

### TEACHER

can apply for a course and manage the course (the relevant material and his pupils)

### PUPIL

will be able to monitor the flow of educational activity offered to him for a specific course

HELLENIC STATISTICAL AUTHORITY
